Lab 4 : SQL

Using the sample University database, do the following statements in SQL

1. Find all those students who were born in 1990.
2. Find all those instructors who lead the subject named 'Introduction to database' in the 3rd semester of 2010 school year.
3. Find all courses that the student named 'Lê Nguyễn Hoài An' has taken in 2010 school year.
4. Find the number of students for each class.
5. Find all students who passed all courses that he/she has taken in 2010 school year.
6. Find the best student for each class in 2010 school year.
7. Find the number of retaken students for each course in 2010 school year.

Note: We refer the good, effective queries by using subqueries to improve the query's performance.
